

World's only adjustable in-cabin carrier

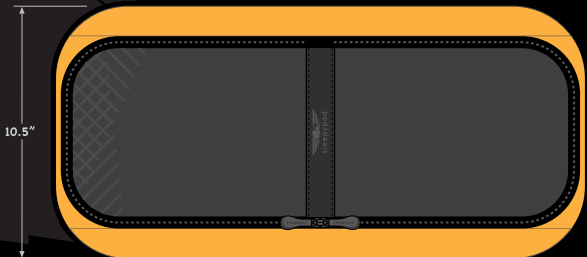

sturdy privacy mesh on 3 sides

keep fully expanded whenever possible

fold to fit under even the tightest underseat spaces

First class legroom on every flight

Sleepypod Air is a revolutionary carrier that redefines in-cabin pet travel. Air adapts to the various under-seat storage requirements set by different airlines while providing maximum comfort for your jet set pet.

Worrying about buying a carrier that will not fit under a plane seat is a thing of the past. Our patent pending folding system allows pets to travel in the largest space possible while the airplane is in the air, yet still allows for stowage under an airline seat during takeoff and landing. When the captain says you can recline your seat, rotate the Sleepypod Air so it is between your feet and expand the ends so both you and your little friend can stretch out comfortably for the duration of the flight. In-cabin pet travel has never been so comfortable.

Features
